'Offering Superior Outcomes'

Specialist Equipment Assessment Team (S.E.A.T) ensuring that equipment is fit-for-purpose following assessment and prescription process.

Clinics and assessments available Traralgon, Geelong & Lynbrook regions.

What is S.E.A.T.?

What services are provided & how can SEAT help me?

The SEAT department offers a range of services to facilitate equipment provision to our clients. Working together with therapists, relatives, carers and end users, we are able to assist in carrying out assessments to ensure appropriate selection of equipment for mobility, postural support and pressure relief.

The clinical assessments within the SEAT department are carried out by Product Specialists and Rehabilitation Technicians provide support in manufacture and assembly, and also with any customized equipment or modifications that may be required.

With a wide range of demonstration equipment, we are able to conduct trials at the home, school or facility, to ensure that it will meet the clinical and functional needs of the client. This can also ensure that the equipment will be fit-for-purpose in the environment where it will be used most frequently.

As well as providing support with equipment provision, the SEAT department is available as a training resource. We are able to provide tailored in-services to facilities or groups of therapists to introduce new products or build up knowledge of existing market products, as part of Continued Professional Development (CPD). The SEAT department is also available to provide ongoing support to our clients, in order to ensure that the equipment is being utilized correctly to provide the client with optimal comfort and postural support.

SEAT is committed to ensuring that we are with our clients, therapists and care-givers throughout every step of the assessment and prescription process.
